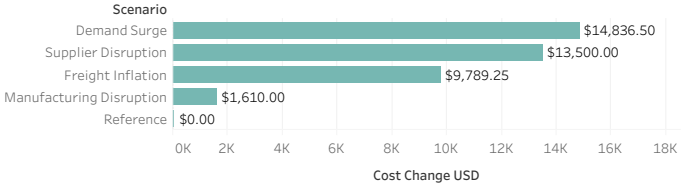
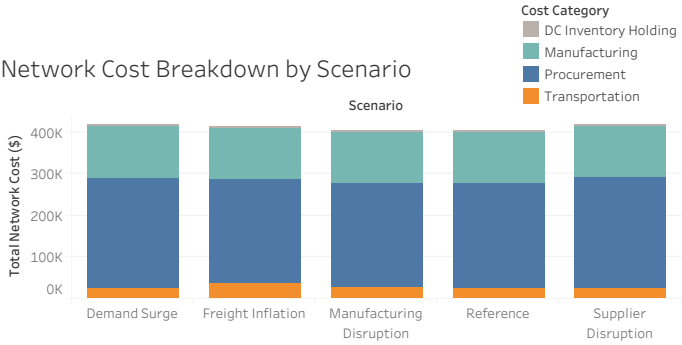
Reference Cost	Highest Cost Increase	Capacity Savings	Disruptions Tested
$404.1K	$14.8K	$7.9K	4

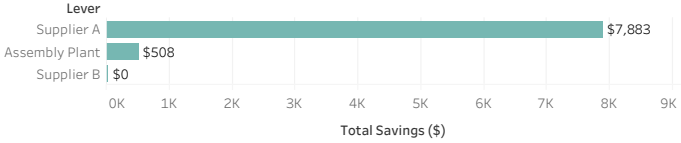
Incremental Cost of Supply Chain Disruptions



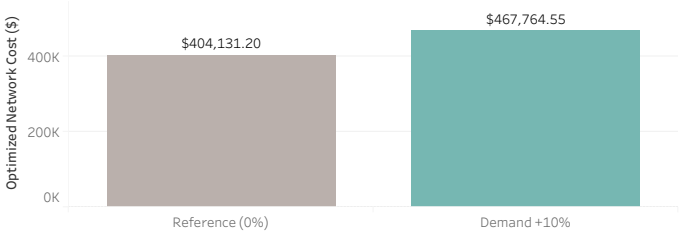
Network Cost Breakdown by Scenario



Best Tested Capacity Expansion Savings



Network Cost Under 10% Demand Growth



Across four hypothetical disruptions, demand surge produced the largest incremental modeled cost ($14.8K), although it also included additional demand. Supplier A capacity expansion delivered the greatest tested gross savings ($7.9K), highlighting the value of targeted capacity investment and resilient sourcing.
